Professional Summary

Experienced .NET developer with a strong foundation in back-end development using ASP.NET Core and Entity Framework Core. Proficient in SQL Server, MySQL, and SQLite, with expertise in writing complex queries, optimizing stored procedures, and managing large datasets. Hands-on experience in healthcare billing systems.

Proficient in SQL Server, MySQL, and SQLite, with expertise in writing complex queries, optimizing stored procedures, and managing large datasets. Hands-on experience in healthcare billing systems.

Skills

Programming Languages: C#, SQL, JavaScript/TypeScript, Java, Python, Rust

Web & Backend Frameworks: ASP.NET Core, Actix-web, SignalR, EF Core, RESTful API Design

Database & ORM: MS SQL Server, SQLite, MySQL, NHibernate, EF Core, Diesel.rs

Mobile & Frontend: Android (Java), Angular, HTML/CSS, Bootstrap, Material UI

DevOps & Tools: Git, GitHub, Linux, Docker, Web Hosting, CI/CD Pipelines

Concepts & Practices: Unit Testing, Clean Architecture, Modular Design, RBAC, Signal/State Management, API Authentication

Experience

Backend Engineer, Medipro Computers – Kathmandu (JAN 2025 – CURRENT)

- Migrated a legacy Delphi desktop system into **.NET + SQL Server** architecture.
- Designed and implemented RESTful APIs for scalable data exchange with Angular clients.
- Optimized stored procedures, views, and functions in SQL Server, improving performance and reducing response times.
- Built backend services for **Digital Health Connect (DHC)**, a government project, enabling real-time hospital data sharing using **.NET + SQL Server, SignalR and long polling**.
- Implemented API key authentication for seamless integration of multiple hospital clients.
- Developed backend modules for **Hospital Registration and Renewal System (HRRS)**, for renewal and registration of health facilities in Bagmati Provinces.
- Enforced secure role-based access control (RBAC) at both API and database levels.

Teacher, Children Environment School – Birtamod (JAN 2023 – NOV 2024)

- Taught Computer Science courses to high school students, focusing on programming and problem-solving.

.NET Developer, Bluelotus – Birtamod (AUG 2022 – JAN 2023)

- Built hotel and restaurant management software using ASP.NET Core, MySQL, and EF Core.
- Contributed to system architecture following Clean Architecture principles.

Junior Web Developer, Crystal Solution – Birtamod (JAN 2022 – JUL 2022)

- Developed a Conference Management System using .NET Core.
- Refactored legacy ERP system by migrating from NHibernate ORM to EF Core.
- Wrote unit tests, participated in deployments, and resolved production issues with the support team.

Education

Mechi Multiple Campus, Bachelor in Computer Application

Dec 2017 - Jul 2022

Projects

News Portal

- Managed news content, reporters, and editors through a C# ASP.NET Core web platform.
- Implemented an ML model for automated news categorization.
- Added recommendation system for personalized news delivery.
- **Tools Used:** C#, ASP.NET Core, SQLite, ML.NET

Medicine Donation Portal

- Connected patients with surplus medicines to NGOs for redistribution.
- Built robust backend with secure CRUD operations and EF Core integration.
- **Tools Used:** C#, .NET Core, SQL Server, EF Core

Library Management System

- Managed books, lending processes, fines, and reporting features.
- Implemented student ID card printing for circulation tracking.
- **Tools Used:** Java Swing, MySQL

Actix Blog

- Built a blog application using Rust web framework Actix-web.
- Integrated database layer using Diesel.rs with SQLite backend.
- **Tools Used:** Rust, Actix-web, Diesel.rs, SQLite

ControlNix

- Created a GTK desktop utility to control Wi-Fi, Bluetooth, brightness, and sound on Linux.
- Focused on simplicity, lightweight performance, and system integration.
- **Tools Used:** Rust, GTK

Haatbazaar

- Android application for buying vegetables and fruits online.
- Features user-friendly interface for browsing products, placing orders, and managing deliveries.
- **Tools Used:** Java/Android, Actix-web
